9/17 9:30 am 15 mg IV toradol

Medication Information Comment:

What is my main medical problem?

[REDACTED] ndrome

Coronavirus disease (COVID-19) Alert:

UPMC cares for the health and safety of all of our patients and their caregivers. During the Coronavirus (COVID-19) pandemic, here is important information.

The Coronavirus disease (COVID-19) is a virus that can cause fever, cough, and trouble breathing, like the common cold or influenza. In severe cases, COVID-19 patients can develop pneumonia, an infection involving the lungs. The virus spreads through close contact when someone is within 6 feet of you. That is why national guidelines recommend being over 6 feet away from others. This is called social distancing to encourage you to remain at a safe distance away from others.

The virus can also spread by droplets in the air when an infected person coughs or sneezes. It spreads when you touch something that has the virus on it, such as a doorknob or a light switch and then you touch your mouth, nose, or eyes. To prevent spread, wash your hands often! Use soap and water to wash your hands and scrub for at least 20 seconds. If soap and water aren't available, use an alcohol-based hand sanitizer. You can't over-wash your hands!

Avoid spreading the virus to others.

-Cover your mouth with a tissue when you cough or sneeze. Then throw the tissue in the trash.

-When you do not have a tissue, cough or sneeze into your elbow to avoid spreading the virus into

the air.

-Wash your hands often and scrub for at least 20 seconds.

-Use a disinfectant to clean things that you touch often.

-Limit contact with others in your home.

-Use social distancing, keeping at least 6 feet apart.

-Remember to wash hands before and after entering commonly used areas such as the kitchen and bathroom.

-Limit contact with pets and other animals.

-Don't share personal items such as bedding, towels, cups, glasses and eating utensils.

Follow-up Details			
Provider	Address	When	Instructions
DANIEL CHURCH		AS NEEDED	

If your blood pressure was 120/80 or higher during your Emergency Department visit, you should see your primary care provider about your blood pressure within the next 2 weeks. This is in addition to any other follow-up recommended for you.

When scheduling your appointments, please confirm the address and telephone number listed is current. If you would like assistance in finding a doctor or making your appointments, please call (800) 533-UPMC (8762). It is *important* to keep all of your appointments.

When scheduling new physician appointments as a result of this visit, it is advisable to verify with your insurer that the provider is within your healthcare network.
